### From the Editor-in-Chief's Desk

#### Dear Readers

Every minute, hour and day/night that passes away leaves history behind. After the first issue Now we are having second issue of the Newsletter 2017 with us with its usual features for the readers to enjoy.

This Newsletter contains two articles titled "Hazardous and Municipal Waste Management" & "Development & Calibration of Low Cost Rainfall Simulator". Interestingly both the articles have been contributed by the life members of ICE(I) and we are happy that our Corporate Members are evincing interest in contributing their articles to enrich the contents of the Newsletter. In fact this Newsletter concerns all who are connected with ICE(I) and we shall be more than happy if more and more members join hands in make it an interesting and enjoyable on.

After the Summer-2017 Examination candidates must be eagerly waiting for their results, which will be declared in due course of time. I take this opportunity to wish good luck for their success in Examination.

As per its schedule ICE(I) will be celebrating Engineers Day on 15<sup>th</sup> September, 2017 and the programme would also include holding of the 7<sup>th</sup> Convocation. All the eligible candidates for certification will be issued their membership certificates. It is a very prestigious and memorable day for the candidates and I wish all those who would be receiving their pass certificate a good luck and career with challenges and fulfillment. I am sure they will keep the code of conduct in their mind and keep high the name of their Alma mater.

**Dr. S.L.Swamy**  
**Chairman**

***Wealth** does not bring about excellence; but, excellence brings about **wealth** and all other public and private blessings for men.*

### From the Editor's pen

#### Dear Readers

The second issue of the Civil Engineer, E-Newsletter 2017 is before you with usual flavor to afford you enjoyable reading.

The World is moving very fast. One cannot really count the changes that have taken place Nationally and Internationally in the recent past. We are lucky that although the world is so vast yet it is so close through the courtesy of print and electronic media. When events are presented in such a way one feels part of the event. Every event affects the humanity directly or indirectly. So much awareness is there that wherever you go people talk of the happenings around them. This is a

healthy sign of an enlightened society and that is what is needed in case we have to contribute in the development and growth of our country. To be participative is not the domain of the academicians. But all have to be alert and whatever our role in society may be, let us put our bit and it is bit by bit that we create an enlightened society and create history.

With my best wishes.

**Prithipal Singh**  
**Secretary General**

*To be idle is a short road to death and to be diligent is a way of life: foolish people are idle, wise people are diligent.*

# HAZARDOUS AND MUNICIPAL WASTE MANAGEMENT

## INTRODUCTION

It is estimated that globally we produce Municipal Solid Waste (MSW) of around 1.3 Billion MT per Annum at present. It is likely to go up to 2.2 Billion MT per Annum by 2025 i.e. within 10 years. Hazardous wastes are the items having vast range and source, unlike MSW which is generated from very limited sources. Hazardous waste varies from a simple biologically non degradable item e.g. spill over oil, a discharged battery of simple pocket calculator etc. to nuclear waste, radioactive material etc.

With 61 % of world's total population as Asian population as per Figure below, the Sustainable world environment would be a hypothetical and arbitrary achievement until and otherwise making **"Building a Sustainable Infrastructure in Asia Pacific Region"**. Hence, while the all nations has to come forward, it would be the prime responsibility of the developed nation from Europe, American sub-continent and developed counties of Asia pacific region to address the issue in global interest. Countries like India, china, Japan, South Korea etc who have large share on waste generation need to be proactive in handling the core issue and working together under common leadership for **"Building a Sustainable Infrastructure in Asia Pacific Region"**

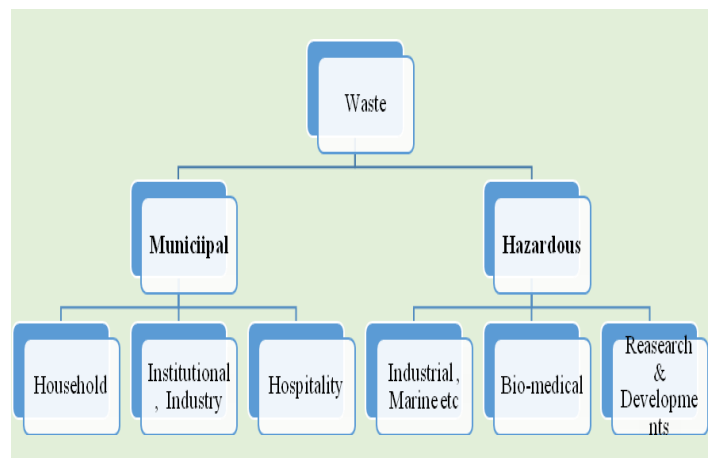

## IDENTIFICATION OF MUNICIPAL AND HAZARDOUS WASTE

**Municipal solid waste (MSW)**, commonly known as **trash** or **garbage**, is a waste type consisting of everyday items that are discarded by the public. "Garbage" can also refer specifically to food waste, as in a garbage disposal; the two are sometimes collected separately.

**Hazardous waste** is waste that poses substantial or potential threats to public health or the environment. Hazardous wastes are generally divided into two major categories: characteristic wastes and listed wastes.

## CLASSIFICATION

## EFFECTS ON ENVIRONMENT

Every product or byproduct leaves an impact to the extent possible on the environment we live in. The impact could be of any nature but generally leaves an adverse impact on environment. This can be more understood with following two recent examples in two important cities of India. Below is the image of the fire in Mumbai landfill in India. The fire erupted on Jan. 2<sup>'</sup> 2016 as per the picture taken from NASA satellite, producing a plume of smoke.

The air quality during days saw three times raised pollution level and as per the data available following was the air quality index for these days in Mumbai as per Table, below.

Date	Index	Range
29-Jan	345	Good (0-50): , Satisfactory (51-100): , Moderate (101-200):
30-Jan	318	
31-Jan	333	
01-Feb	307	

However in case of hazardous waste, the situation can be worse. The impact could be imagined with the radiation leak from Cobalt-60 in March 2010. Wherein the source, a gamma unit containing Cobalt-60 pencils, was improperly disposed of by a research institution at Delhi University. The unit was sold off to unsuspecting scrap dealers who dismantled the equipment. This event subsequently caused severe radiation accident, resulting in seven radiation injuries and one death. Five patients suffered from the hematological form of the acute radiation syndrome and local cutaneous radiation injury. While four patients exposed to doses between 0.6 and 2.8 Gy survived with intensive or supportive treatment, the patient highest exposure of 3.1 Gy died due to acute respiratory distress syndrome and multi-organ failure on Day 16 after hospitalization.

### Methods to mitigate the adverse impact

The best mitigation plan would include, followings:-

1. Separate responsible bodies for Municipa and Hazardous waste.
2. Regulations to be implemented regarding entire process

3. Training to be to minimize the wastes in their respective operations.
4. Proper landfill sites and disposal yard to be identified for each waste.
5. Incentive and tax reliefs to organizations associated with the process.

### ECONOMIC ADVANTAGE AND EMPLOYABILITY IN SECTOR

Wastes can be converted in to revenues by recycling. Recycling is well-known for its environmental benefits, beside significant economic benefits. Recycling is an important segment of the national and state economy, creates jobs and saves money for generators of waste.

**“So, waste is not a “waste” always. Sometimes “Waste is Wise”.**

Organizations are now taking up waste as potential source of revenue. Organizations like SPML Enviro ([www.spml.co.in](http://www.spml.co.in)) in municipal waste management and IL&FS Environmental Infrastructure and Facilities Limited ([www.ilfsindia.com](http://www.ilfsindia.com)) in processing of Construction & Demolition waste into other useful construction material. Similarly, Fly-ash generated from NTPC Delhi's Badarpur and Dadari's plant are being used in manufacturing of fly-ash bricks and replacing the fine particle content in concrete by replacing cement content.

A recent study released by the Associated Chambers of Commerce and Industry of India (ASSOCHAM) showed that as many as 8,500 mobile phones, 5,500 TVs and 3,000 personal computers are dismantled in Delhi every day for reuse of their component parts and materials. In Delhi, it is estimated that over 150,000 workers are employed in official and unofficial e-recycling units. With just 12 Million of people in Delhi generate the employment and economic opportunity and we can imagine the potential for economic and employability with 1.2 Billion population of India.

As per the estimate, India generates about 4.5 MT of hazardous wastes annually. Out of these 1.7 MT waste are recyclable; 1.89 MT are incinerator able and 2.5 MT are disposable in secured landfills. Major quantities of recyclable Hazardous wastes are from metallurgical activities and the other non-recyclable hazardous wastes include chemical sludge, spent catalyst, oily sludge.

Non-ferrous metal wastes, it is estimated that annually about 11 MT of blast furnace slag is being released from steel plants. There are three types of slags namely, blast furnace slag, converter slag and electric furnace slag. The first two are produced by pig iron industries and the third is generated by the steel industry. The blast furnace slag, is categorized as group I waste and has been used in the manufacture of blended cement improving its soundness, strength, morphology, and abrasion resistance. However, group II materials, i.e. ferro-alloy industrial waste, have not been used extensively, but have great potential for recycling. All these solid wastes have been used in production of Portland blast furnace slag cement, super sulphate cement, as an aggregate in high strength concrete and light weight concrete. The group III materials include the tailings of iron, zinc, copper and gold ore beneficiation and have been used as fine aggregate or concrete filler material in the construction industries.

Figure- C&D waste plant at Burari, Delhi and product of plant i.e. concrete paver.

## RECOMMENDATION

Beside the managing waste by proper upkeep and cleanliness, followings are also recommended way to manage the waste effectively and efficiently with value additions.

- Announcing Incentive on income from waste recycling and reuse.
- Waste monitoring and management function must be made compulsory.
- Learning and training program must be initiated by the Government
- Tax exemption must be announced on income generated
- Waste Recycling process be given the status of an Industry

# DEVELOPMENT & CALIBRATION OF LOW COST RAINFALL SIMULATOR

Rainfall simulators have been used with a lot of success since the last century to conduct research in the area of infiltration, surface runoff and/or soil erosion which affect the life of our reservoirs. Change in infiltration rate, surface runoff directly affect the water reaching the reservoirs as well as soil eroded along the path or during rainfall ultimately ends up reducing the storage capacity of the reservoirs. Meyer (1965) and a lot of other workers have pointed out the different advantages of simulated rainfall in contrast of natural rainfall. It is always desirable and advantageous to study these parameters under natural conditions; the data acquisition is very slow or can be erroneous. The measurements of spatial and temporal distribution of the rainfall intensity, duration and kinetic energy under natural rainfall cannot be controlled.

According to Dunkeley (2008) and Lascelles et al. (2000), rainfall simulators are convenient tools for creating rain events of nominated properties. They essentially give the researchers an opportunity to increase the experimental control of a variety of variables that otherwise are out of the control of humans in case of natural rain analysis. These features come in really helpful to carry out hydrologic and soil erosion studies, wherein it is often desirable to extend field observations made under natural rain in a controlled way through the use of simulated rain. Rainfall simulators offer a wide range of advantages, such as the ability to create replicate rain events of identical properties or varying parameters of interest. However, these simulators do have some disadvantages, which are:

- Limitation of the area under study, since normally they are very limited to a few square meters as opposed to the actual area of consideration which may run in thousands of square kilometers.

- The limitation of the area also causes limitation in the representation of slope and all features of the natural ground area of concern.
- They are not able to produce the drop-size distributions that are representative of natural rainfall.
- Simulators do not have the ability to produce rainfall intensities with the temporal variations of natural rainfall.
- Small lab based simulators do not produce rain drops with terminal velocities of natural rainfall.

A simulator however is able to carry out actual rainfall in the laboratory to carry out the geomorphologic study for different rainfall events. Geomorphologic studies such as soil erosion, sediment transport, run off generation etc. can be carried out for flat as well as sloping terrain. It can be used in laboratory condition as well as on field. The main advantage of the rainfall simulator is to take measurement without having to wait for natural rainfall event. The work can be done on the controlled rainfall and there by uncertainty of natural rainfall event with time and/or space is eliminated.

## Rainfall Simulator

A practical and cost-efficient rainfall simulator for urban hydrology research has been designed and calibrated. The rainfall simulator is being used as a tool for experimenting with permeable media in various conditions of horizontal and sloping profiles. The designed rainfall simulator has been prepared using a 50 mm steel box section having out to out dimensions of 2.25 m by 2.5 m. This outer frame is used to create the required rainfall on the designated plot area. A single full cone spray nozzle with a spray angle of 120° has been fitted to a 25 mm diameter GI pipe so as to keep the nozzle spray height

as 1.91 m. According to the manufacturer, this type of industrial nozzle can provide, working at pressures around  $5 \text{ kg/cm}^2$  with flow around  $1.8 \text{ m}^3/\text{h}$ . It produces a solid cone-shaped spray pattern with a round impact area and uniform distribution of water over a wide range of flow rates and pressures. To obtain variable rainfall intensities, two valves have been placed one near the pump and another just before the nozzle to control the flow and pressure of the spray. The rainfall simulator can produce rain over a plot area of  $4 \text{ m}^2$  ( $2 \times 2.0 \text{ m}$ ) with a tank depth of  $0.45 \text{ m}$  as well as a side gutter of  $0.25 \text{ m}$  for use in soil erosion studies. The tray has a facility to be tilted to study gradient behavior up to 1 in 10. The soil tank has a facility of fixing filters at the bottom which in turn are connected to the manometers to study the water pressure profile of the soil during a rainfall event as well as study the effect of water runoff or dissipation of this pressure. The complete tray area has been equally divided to get 142 points for attachment of manometers. The openings at the base are fitted with brass filters and PU fittings such as to connect them to 3 mm ID manometers. The simulator can be easily dismantled for transport to field work. The total cost to construct the rainfall simulator was INR 90,000/-. The designed rainfall simulator is able to simulate rainfall intensities from  $45 \text{ mm/h}$  to  $450 \text{ mm/h}$ .

Water was supplied for the rainfall simulator by a 1 HP pump capable to give an output of 3000 to 200 lph at an average head 10 m to 40 m. The pump transfers water from a  $1 \text{ m}^3$  reservoir to the nozzle. The connection between the pump, reservoir and the inlet line of nozzles has been made with a 25 mm diameter flexible hose. The flow rate was controlled by a valve and the pressure was monitored by a glycerin pressure gauge installed in the supplying pipe of the simulator. Figure 1 illustrates the designed rainfall simulator.

The soil tray bottom has been overlain with a 1 mm woven geotextile with an EOF (effective opening size) = 0.1 mm to act as a barrier

restricting the entry of soil particles in the filter. Soil i.e. sand passing 1 mm and retained on 600 micron retained was used and rained down uniformly to fill the tray up to a depth of 10 cm.

Fig. No. 1 Low Cost Rainfall Simulator

### Calibration of Rainfall Simulator

The next step is to calibrate the rainfall simulator to achieve the exact flow rate for the selected nozzle and to verify uniform distribution of raindrops across the target area. The complete area is divided in such a way to get 81 selected points for collection of water. Uniformity calibration has been done keeping the tray horizontal for different rainfall heights varying from  $0.87 \text{ m}$  to  $1.91 \text{ m}$  from the top of the tray for a soil fill height of  $10 \text{ cm}$ , at an interval of  $0.25 \text{ m}$ . Desired pressure and flow rate has been adjusted by operating ball valve in clockwise or anticlockwise direction.

The initial flow of the nozzle is collected using a 50 mm pipe and diverting the flow to a calibrated cylinder to cross verify the flow indicated in the rotameter. This procedure was repeated at each rainfall height over the complete range of pressures from 1 to  $3 \text{ kg/cm}^2$  in steps of  $0.5 \text{ kg/cm}^2$ . Once the nozzle calibration and the rotameter calibration is completed, the rain is allowed to fall over the soil tray, which has 100 ml plastic beakers placed over a regular grid pattern acting as rain gauges. The catch cans are arranged in  $9 \times 9$  grid for the purpose. The rain is allowed to fall for a time period of 1 min and then the volume of water collected is measured in each of them.

The procedure is repeated for different pressures at different heights. The values are plotted to determine the uniformity of the rainfall across the soil tray.

## ADD TO YOUR VOCABULARY

- **Shore**

A strut or prop placed against or beneath a structure to restrain movement.

- **Shoring**

A temporary support erected in a trench or other excavation to support the walls from caving in.

- **Side Sewer**

The portion of the sanitary sewer which connects the interior waste water lines to the main sewer lines. The side sewer is usually buried in several feet of soil and runs from the house to the sewer line. It is usually 'owned' by the sewer utility, must be maintained by the owner and may only be serviced by utility approved contractors.

- **Shrinkage Index**

The numerical difference between the plastic and shrinkage limits. ASCE

- **Slab Bridge**

A bridge having a superstructure composed of a reinforced concrete slab constructed either as a single unit or as a series of narrow slabs placed parallel with the roadway alignment and spanning the space between the supporting abutments.

- **Slenderness Ration**

Ratio of the effective height of a member to its effective thickness.

- **Slurry**

A mixture of water and such finely divided materials, such as portland cement, slag, or soil in suspension.

- **Soffit**

The underside of a overhanging cornice of a building extending out from the plane of the building walls.

- **Spalling**

The chipping or flaking of concrete, bricks, or other masonry where improper drainage of venting and freeze/thaw cycling exists.

- **Spread Footing**

A footing which is wide and usually made of reinforced concrete; ideally suited for foundation material with moderate bearing capacity.

Shastri Bhawan, New Delhi,  
the 6<sup>th</sup> November, 2007

**NOTIFICATION**

No.F.24 – 1 / 2007 – TS.III. On the recommendations of the High Level Committee for recognition of Educational Qualifications in its meeting held on 22<sup>nd</sup> May 2007, the Government of India has decided to give recognition to the Section A & B of Associate Membership course, equivalent to Degree and Part – I & II of Technician Engineers (T) equivalent to Diploma in Civil Engineering and Architecture Engineering Courses conducted by the Institution of Civil Engineers (India), Ludhiana (Punjab) as per syllabus approved by All India Council for Technical Education (AICTE) w.e.f. the academic session 2007 – 2008 for the purpose of employment to the posts and services under Central Government in the appropriate field. It is subject to the conditions that the total number of candidates who can be admitted for the said examination would not exceed the authorized strength of the concerned Institutions with which Institution of Civil Engineers (India), Ludhiana (Punjab) has entered into Memorandum of Understanding (MOUs). A review in respect of recognition of educational qualifications shall be made by Ministry of Human Resource Development after one year through All India Council for Technical Education (AICTE).

ICE(I) also participated in these meetings.

## Alumni.....A Lifelong Relationship ! Keep it alive!

Alumni Engagement is at the core of the Institution of Civil Engineers (India). Keeping this in mind, the institution has worked towards building a strong alumni community and will continue to work in this direction.

**“Alumni are the true brand ambassadors of their Alma Mater and represent it everywhere they go. They truly reflect the values of the institution from which they have graduated.**

In order to actively engage our alumni, The Institution of Civil Engineers (India) encourages alumni participation to bring them together by providing a forum for meeting and exchange of views, to facilitate professional networking for mutual benefit and to contribute to the Institution’s efforts for achieving excellence in academics and research through sharing knowledge and expertise of its members in areas pertaining to academics, infrastructure, industry interactions and others, if any.

The Alumni are also invited for seminars, conferences, advancement programs etc. to enhance their learning’s which they can further use in their own respective work areas.

Keep reading this column for more news and updates on our Alumni.....!!.

The Members, who have not yet enrolled, may get in touch with us on [icei.alumni01@gmail.com](mailto:icei.alumni01@gmail.com) or at Delhi Office.
