# Obituary

**Shri. P.P. Singh (Tinkle Bindra) Managing Chairman of the Institution of Civil Engineers (India) is no more with us. The cruel hands of death has snatched him away from us on 19<sup>th</sup> December, 2016. The void which has been created with his untimely sad demise cannot be filled.**

**On hearing the sad news of his sudden death, the staff members of ICE(I) met on 19<sup>th</sup> December, 2016 and held a Condolence Meeting and adopted the following Condolence Resolution.**

**Copy of the Resolution passed at the Condolence Meeting of the Staff of ICE(I) on 19th December, 2016.**

**“Members of the Staff of The Institution of Civil Engineers (India) have learnt with great sorrow and grief the shocking and unbelievable news of the sudden demise of Shri. P.P. Singh (Tinkle Bindra), Managing Chairman, ICE(I). The news of his passing away has shaken us all.**

**Shri Bindra was one of the founders of The Institution of Civil Engineers (India) and the Institution will not be able to fill the vacuum of this strong pillar of this Institution.**

**Shri Bindra was a born leader of the masses who commanded their love and respect throughout his life. He was a source of encouragement and inspiration to all those who came in contact with him. Shri Bindra was a splendid man of integrated personality and a politician above board who made significant contribution in the political field and also in the social life particularly as President of Indian National Sikh Youth Forum.**

**At this critical juncture the Staff of ICE(I) share their grief and sorrow with all his near and dear ones and offer their heartfelt condolences on this tragedy to the bereaved family with prayers to Almighty God to give peace to the departed soul and forbearance to the bereaved family”.**

This is a usual Newsletter before you except its Patron Shri. P.P. Singh (Tinkle Bindra) not being there. I am unable to write further and therefore we shall continue this task in the next issue.

### From the Editor-in-Chief's Desk

#### Dear Readers

I am writing this with a very heavy heart when I am without my dearest colleague Shri. P.P. Singh (Tinkle Bindra) Managing Chairman of the Institution of Civil Engineers (India). He was always with us being one of the Founders of this Institution right from its inception. Nobody could have imagined that he will be leaving our hand so soon. We have now been deprived of his wise counsel and constructive suggestions forever.

Nobody can do anything before the will of God. We can only pray for the peace of the departed soul.

**Dr. S.L.Swamy**  
Chairman

*No one can be right all of the time, but, it helps to be right most of the time.*

### From the Editor's pen

#### Dear Readers

We have closed the year 2016 with a very sad note to find that one of our founder members Shri. P.P. Singh (Tinkle Bindra) Managing Chairman of the Institution of Civil Engineers (India) is no more with us as he left for his heavenly abode on 19th December, 2016 leaving us bewildered. He was the strongest pillar of the Institution who guided its affairs ever since the inception of this institution. It was the most unexpected breaking news of the year. The year 2016 while going has given us this tragedy which the institution cannot forget throughout its existence.

This is the law of nature. Nobody is permanent in this world. Who soever has come in this world has to depart the world on the date time and place fixed for him/her. One goes never to come back in this world in the physical form and the departed soul takes its place in the lap of God leaving behind all the dear and dear

ones to live on the memories alone. The good memories of the noble people like Shri Tinkle Bindraji occupy permanent place in the mind praying with holded hands to give peace to the departed soul.

The New Year 2017 has begun with new hopes and aspirations. If one looks back to the previous years, one realizes that although much has been achieved yet much more needs to be achieved. One can only pray that the world may be a peaceful and pleasurable place to live in for everybody.

The mind is too full to write the editorial with more patches of information from here and there. Let us look forward for a more peaceful and comfortable time to talk about the world issues.

Good luck till then.

**Prithipal Singh**  
**Secretary General**

## STONE v/s STEEL

Among the many advantages of Light Gauge Steel Framing technology, is its versatility and speed. With the vast number of multi-storey apartments, hotel and office blocks being constructed, it is a pity that it still has to contend with moving blocks up tens of floors, and spend a considerable amount of time constructing the partition walls with these stones. In as much as stone has been trusted over the years, the numbers simply don't add up to support this choice.

### Stone

The downside with the stone walls is that they are labor intensive, time consuming and obviously costly. Each block weighs not less than 10 kg. A 1m wide x 2.8m high wall will require approximately 30 blocks whose combined weight is 300 kg. It therefore means as a client, you have to come up with huge costs for lifting tonnes of stone, cement and sand as high as your building goes higher.

For engineers, this poses a considerable challenge. Assuming grids of say 5m, this means every floor and on every grid, you have an additional 15KN in dead weight to design for. Even assuming a simple square building of 5mx 5 m that rises 6 floors, on each floor the Engineer has 30KN of load to sustain and on 6 floors you are looking at 180KN in dead weight. This is a very huge load applied on a building.

The same cost is passed onto the client. The engineer will provide more reinforcement, bigger columns, deeper beams to safety take this additional load to the foundation. During construction, the cost keeps on escalating. Either way looking at it (mechanical or manual), it will take up time and money to lift the required blocks on each floor. Depending with the teams on site, it will require several fundis and their helpers to bring up the walls. All these take up your labor costs considerably.

### Light Gauge Steel

With Light Gauge Steel Framing technology, one of the biggest gains for the client is cost. Assuming again a 1m wide x 2.8 m high wall, you will require only two boards on either side of our steel frame. Assuming 12mm boards for wall cladding, the combined weight for the boards is 60kg.

For the same measurement, steel will weight approx 0.2KN. This means in the same area as stone above, the weight is only 0.8KN. Working with the same grids as before, in 5m span it has only 2KN on a grid and 8KN on a floor. For 6 floors, this is 48KN.

Another added advantage is that with our Technology, you get the benefit of added sound and thermal insulation. This is a very big added value especially for office blocks, hotels and apartments. With Light Gauge Steel framing technology, one can design all wall frames and have them produced and assembled offsite. On site then, the cost of hoisting is greatly reduced as you will hoist complete wall frames and boards. Whether it is by mechanical or manual means, time is saved greatly in lifting all walls to the floors.

The time to erect these frames will also be amazingly fast. With all measurements taken before, each wall is precisely fit and anchored to the beams and/or columns as required. The cladding can then be done immediately and the finishes commenced. This compared with stone, the overall speed of project is increased by a great percentage and at the same time greatly reduces cost of construction.

## ADD TO YOUR VOCABULARY

- **Roof Truss**  
Any frame or structure with diagonal members that can withstand compression forces. Examples include any girder, roof or floor truss system.
- **Rose Window**  
A circular window with tracery arranged like the spokes of a wheel; found in Gothic Revival church architecture.
- **Run**
  - 1) With stairs: The horizontal distance of one stair in a staircase. It is how far “in” the stair goes which gives the amount of room for someone’s foot as he or she climbs the stairs. Per most Building Codes, the run should be between 8 ¼ inches and 14 inches. An intermediate run is 11 inches.
  - 2) With a roof, the run is the horizontal distance of a section of roof, compared to the rise, which is the vertical distance of that same section. When measuring the pitch of a roof the run is one foot.
- **Runway, Surfaced**  
A flexible or rigid paved airfield surface used for normal takeoffs and landings of fixed or rotary wing aircraft. It can also accommodate rotary wing aircraft. For inventory purposes, only the prepared runway surface is included.
- **Scaffold**  
A temporary erection of timber or metal work used in the construction, alteration or demolition of a building, to support or to allow the hoisting and lowering of workmen, their tools and materials.
- **Scaling**  
The gradual deterioration of a concrete surface due to the failure of the cement paste caused by chemical attack or freeze/thaw cycles.
- **Scour**  
Erosion of a river bed area caused by stream flow.
- **Scour Protection**  
Protection of submerged material by steel sheet piling, rip rap, a mattress, or combination of such methods.
- **Sealant**  
An elastomeric material with adhesive qualities applied between components of a similar or dissimilar nature to provide an effective barrier against the passage of the elements.
- **Segregation**  
The tendency for the coarse particles to separate from the finer particles in handling. In concrete, the coarse aggregate and drier material remains behind and the mortar and wetter material flows ahead. This also occurs in a vertical direction when wet concrete is over vibrated or dropped vertically into the forms, the mortar and wetter material rising to the top. In aggregate, the coarse particles roll to the outside edges of the stockpile.
