From the Editor-in-Chief's Desk

Dear Readers

Online issue of the E-Newsletter of ICE(I) appears each quarter and the first issue of the first quarter of the Year 2018 has been released. This issue apart from its usual features contains two very interesting articles. The first article on "Concrete Batching Plants for Concrete Road Construction" deals with different types of Concrete Batching Plants manufactured by a particular firm in India with their specified features. These Batching Plants are quite convenient in road construction. These plants are operated using control systems which range from semi automatic to fully automatic. These plants are manufactured by M/s. Schwing Stetter India who believe in high quality and prompt after sales support.

The second article titled "Grey Water Reuse: The Future Solution of Water Efficiency" speaks about the reuse of all waste water generated in house hold or office buildings from streams without fecal contamination. This system reduces the demand for fresh clear water and reduces the waste water to be conveyed and treated. In addition to providing a dependable locally controlled water supply, water recycling provides tremendous environmental benefits.

This issue of the E-Newsletter also contains the date sheet for the Summer Examination of ICE(I) which starts from Monday the 4th June, 2018 at the Examination Centres which will be notified by the ICE(I).

I take this opportunity to wish you all success in the examination.

Dr. S.L.Swamy
Chairman

Planning is a powerful action that will bring you many rewards throughout the years to come.

From the Editor's pen

Dear Readers

2018's first issue of the E-Newsletter of the ICE(I) is before you. It contains the usual features to make an interesting reading by you.

We have come a long way in our journey to provide educational facilities leading to obtaining of Degree and Diploma level qualifications in Civil and Architecture Engineering by those who are working professionals and who have not been to do so for reasons beyond their control.

I must say that lucky are those who took a wise decision to restart their educational journey. Time is running and

the time gone by does not come back. It is said that past is a waste paper, the present is a newspaper and the future is question paper and we must write our answers carefully on the answer book of our life. This is the law of nature. Whenever any opportunity is available one must avail it. It is said "Strike when the iron is hot" but now the approach is that "That too first" because everybody would like to strike the iron when it is hot and why one should not attempt to strike it first lest one misses the chance. One must remember this principle in life to be successful as this is a competitive world where the survival is only for the fittest.

With my best regards

Prithipal Singh
Secretary General

Talk less about the years to come, Live, love and labor more today.

CONCRETE BATCHING PLANTS FOR CONCRETE ROAD CONSTRUCTION

Schwing Stetter is an organization which is capable of meeting the demand arising in infrastructure development where concrete is involved. Our presence is very strong in concrete road construction, construction of Dedicated Freight corridors for railway, metro rail construction, high rise construction, hydropower plant construction, dam construction for irrigation and power and in real estate projects besides a variety of power projects like thermal, nuclear, solar and gas based. We are strongly present in Windmills. In infra growth concrete road plays a major part.

H1J Horizontal Batching Plant with AM/SHC Transit Mixers for Road Upgradation (Khanlyadana-Kadvaya-Gudar), Madhya Pradesh Project

Concrete Batching plants in concrete road construction

Our Customers have stood through generations for Stetter batching plants for long standing quality, efficiency and longevity. We at Schwing stetter India manufacture concrete batching plants for concrete road construction and supply GOMACO pavers and XCMG graders to pave and grade these roads. Our concrete

truck mixes and truck mounted concrete boom pumps also play an important role in transporting and pouring concrete.

Batching Plant: Schwing stetter India analyses each customer's requirement, guides the customer to opt for that batching plant which would suffice his needs of concreting from the wide range available.

There are four different types of batching plants that are manufactured by Schwing Stetter India, which include

- Wheel-Trailer/Truck Mounted
- Compact Plants
- Mobile Plants
- Horizontal Plants

SP 1800 concrete pump and AM6SHNRHV Concrete Mixer at Gift City Canchi Nagar

Wheel-Trailer/Truck Mounted

The On-Wheels concept has been introduced by Schwing Stetter India, keeping in mind the easy transportability of the batching plant between sites. This design is available in the 18 m segment which is also known as the 'CP18 on Wheels' which can be a trailer or a truck mounted batching plant.

Compact Plants

The compact plants in 30m category is designed as such that the customer moves it from one place to another. So for this purpose we have designed the compact plant CP 30 in a containerized format. Even a customer can ship it out of the country easily in a 40 ft container. So, it reduces the tremendous cost of transportation. Besides, the customer can re-erect the plant in a quick fashion. The compact plants are design houses which include the Model CP30 (30m' productivity rate) and CP45 (45 m' productivity rate). These plants are available in star, compartment and in-line Silo configurations.

Mobile Plants

Mobile plants are for those customers who would like to move the plant from project to project quickly.

CP 30 Batching Plant at Ahmedabad Mega metro Rail Project

M I C –Mobile Batching Plant at Embassy it Park Pallavaram

A lot of costs is involved in the construction of the foundation and other infrastructure. Mobile plants keep such

cost in the minimum and is ideally suited for road construction. The Mobile Plants are known for their easy assembly and erection at the site like the M1, M1.25, M2.25, M2.5, M21Z and M30Z. Wherever construction sites have to be supplied for any length of time with larger quantities of high-quality concrete mobile mixing plants from Schwing Stetter India are ideal. It does not matter whether they are used for the construction of traffic routes, dams, landfills or airports. The M series plants have been designed to handle the tasks. They can be quickly moved, transported on low-bed semitrailers and quickly set up again thanks to the fully installed pre-assembled compact units. The current development status of the mobile plant benefits from our vast experience worldwide.

Horizontal Plants

Horizontal Plants are for customers who would like to stay in a particular location for a long period of time like dam construction, for ready-mix. Stetter horizontal concrete mixing plants H1N, H1, 25N, H2H, H3H, H4H, H5 and H6 incorporate the experience of over 72 years in mixing plant technology.

Mixer Technology

The objective of any concrete production is a homogenous mix of concrete in the absence of which a series of problems will be faced by the end users of concrete. There are two mixer technologies which help achieve this homogeneity, which are

- Pan mixer
- Twin –Shaft Mixer

The turbo pan mixer used by Schwing Stetter India is famous for mixing quality. Thanks to its gearbox driven arms while the Twin-shaft mixer is preferred wherever vast quantities of concrete are to be produced.

It is also important to understand that all these plants are operated using control systems which range from Semi-Automatic (MCI35) to fully Automatic (MCI550). The state of the art technology of the batching plants and their reliable quality has helped Schwing Stetter India earn its place as the Leader in the Ready Mix Concrete equipment Industry.

From residential, roads, dams, bridges, canals to nuclear projects Schwing Stetter India equipments have widespread applications and are called the first and the best choice of the RMC Industry. These equipment have played a vital role in the fabrication of precast barriers of Metro Rail and Airport Projects across the country. Schwing Stetter India batching plants also produce temperature controlled concrete for nuclear power plant applications.

Achievements

Schwing Stetter India has proved its mettle among all odds by making and holding records in the industry. The company holds the All India Record for maximum Pavement Quality Production in one day of 5050m' of concrete at Dankaur where the Yamuna Express-way is under

construction. Schwing Stetter India also clinched the record in Dam Concrete production with 6020 m' of concrete at Subansri. Schwing Stetter India created a benchmark recently at the Statue of Unity, when a mass pour of 4354m³ concrete pour got completed, once constructed will be the world's tallest statue ever built in the history.

Schwing Stetter Service Department

The road construction opened up job sites in Central and North India. Therefore, Schwing Stetter immediately reorganised their service network in such a way, that all Stetter plants for road construction are within 200 kms of our service points and for the road infrastructure, we have increased our service by 20% and currently, we have team of 300 service engineers across the length and breadth of the country.

Conclusion

A Number of plants sold for National highway concrete roads is around 107. With service and spaces support across the country and a customer centric manufacturing facility. Schwing Stetter India's Mission and vision is Customer Satisfaction. A customized solution provider and a brand known for high quality and prompt after sales support, Schwing Stetter India has been rated as the best take in the market for providing solutions pertaining to the Concreting Industry.

GREY WATER REUSE : THE FUTURE SOLUTION OF WATER EFFICIENCY

The increasing development of worldwide green building projects, especially those related to the Leadership in Engineering and Environmental Design (LEED) standard, provide the contextual basis for the implementation of water conservation strategies. As access to clean water continues to be a source of concern in many areas of the world (including the U.S) water efficiency strategies in green building practices are becoming paramount to new and existing construction efforts. Given the scope of terms associated with water efficiency in green building, there are numerous terms that describe key elements in the design and implementation of water conservation strategies. One of the most important elements of understanding water efficiency is the diversification of water terms in green building practices. One such famous practice is Greywater System.

Greywater (also spelled graywater, grey water, gray water) or sullage is all wastewater generated in households or office buildings from streams without fecal contamination. i.e all streams except for the wastewater from toilets. Sources of greywater include, sinks, showers, baths, clothes, washing machines or dish washers. As greywater contains fewer pathogens than domestic wastewater, it is generally safer to handle and easier to treat and reuse onsite for toilet flushing, landscape or crop irrigation, and other nonpotable uses. The application of greywater reuse in urban water systems provides substantial benefits for both the water supply subsystem by reducing the demand for fresh clean water as well as

the wastewater subsystems by reducing the amount of wastewater required to be conveyed and treated. Treated greywater has many uses, for example, toilet flushing or irrigation

Benefits

Demand on conventional water supplies and pressure on sewage treatment systems is reduced by the use of greywater. Reusing greywater also reduces the volume of sewage effluent entering water courses which can be ecologically beneficial. In times of drought especially in urban areas, greywater use in gardens or toilet systems helps to achieve some of the goals of ecologically sustainable development.

Grey Water Usage

The potential ecological benefits of greywater recycling include

- Reduced freshwater extraction from rivers and aquifers
- Less impact from septic tank and treatment plant infrastructure
- Reduced energy use and chemical pollution from treatment

- Groundwater recharge
- Reclamation of nutrients
- Greater quality of surface and ground water when preserved by the natural purification in the top layers of soil than generated water treatment processes.

In the U.S. Southwest and the Middle East where available water supplies are limited, especially in view of a rapidly growing population, a strong imperative exists for adoption of alternative water technologies.

The System:

A greywater system diverts waste water either to irrigation or a treatment and recycling System. The key consideration is the health and safety of property users. Greywater systems used for irrigation typically comprise a surge tank and a method of discharge to an irrigation system. Greywater systems used for toilet flushing should have a treatment system. Greywater systems must comply with Building Code requirements.

Greywater is water from basins, baths and showers that is piped to a surge tank. The greywater is held briefly in the tank before being discharged to an irrigation or treatment system. The greywater can be diverted either by gravity or by using a pump.

Basic grey Water system

The surge tank can be any type of container that is suitable for holding (but not storing) the initial surge of water. The surge tank must be emptied completely each time greywater is dispersed to the Irrigation or treatment system - greywater must not sit for extended periods of time in the tank.

The surge tank should:

- be vented
- have a trapped overflow
- discharge directly into the sewer or to an on-site discharge
- be sealed
- be vermin proof.

Treatment of greywater

Treatment of greywater may include.

- filtering
- settlement of solids
- flotation and separation of lighter solids
- anaerobic or aerobic digestion
- chemical or UV disinfection.

Greywater used for irrigation should be filtered as it still contains high levels of solids and is otherwise likely to clog their rogon system.

Considerations:

- Greywater may contain traces of dirt food, grease, hair, and certain household cleaning products. While greywater may look "dirty," it is a safe and even beneficial source of irrigation water in a yard.
- Keep in mind that if greywater is released into rivers, lakes, or estuaries its nutrients become pollutants, but to plants, they are valuable fertilizer.
- Aside from the obvious benefits of saving water (and money on your water bill) reusing your greywater keeps it out of the sewer or septic system, thereby reducing the chance that it will pollute local water bodies.

- Reusing greywater for irrigation reconnects urban residents and our backyard gardens to the natural water cycle.
- The easiest way to use greywater is to pipe it directly outside and use it to water ornamental plants or fruit trees.
- In any greywater system, it is essential to use "plant friendly" products, those without salts, boron, or chlorine bleach. The build-up of salts and boron in the soil can damage plants.

The system of grey Water Usage

In addition to providing a dependable, locally-controlled water supply, water recycling provides tremendous environmental benefits. By providing *an* additional source of water, water recycling can help us find ways to decrease the diversion of water from sensitive ecosystems. Other benefits include decreasing wastewater discharges and reducing and preventing pollution. Recycled water can also be used to create or enhance wetlands and riparian habitats.

The future application of the system

Recycled water can satisfy most water demands, as long as it is adequately treated to ensure water quality appropriate for the use. The Treatment and Uses chart shows types of treatment processes and suggested uses at each level of treatment in uses where there is a greater chance of human exposure to the water, more treatment is required. There are many ways the proper treatment and reuse of greywater can help alleviate the demands on our existing water supply. In addition to generating water for toilet flushing and laundry, it can be used for the irrigation of plants—from parks, sports fields and golf courses to agricultural fields. Not only does this process reduce the need for fresh water, it also cuts down on the amount of wastewater in our sewer systems, both of which are sustainable benefits.

ADD TO YOUR VOCABULARY

- **Bascule**
Device balance so that when one end is lowered, the other is raised. Hinged cantilever balance by a weight.
- **Bascule Bridge**
A bridge over a waterway with one or two leaves which rotate from a horizontal to a near-vertical position, providing unlimited clear headway.
- **Baseboard Trim**
Typically a wood trim board that is placed against the wall around the perimeter of a room next to the floor. The intent is to conceal the joint between the floor and wall finish.
- **Bat**
Piece of brick with one end intact, which is used to fill in a section where only a partial brick will fit.
- **Batter**
Type of wall that is purposely built to slope on the outside even though it is straight on the inside. Also, masonry that slopes back in courses and is the reverse of a corbel.
- **Before Sheathing Window**
Term for a window, which is, installed prior to the sheathing being installed, having an extra strip of wood on the side that is nailed directly through to the studs. It is more difficult to install than a window that is installed after sheathing.
- **Belt Course**
A course (horizontal layer) of stone or brick, flush with the wall or projecting from an exterior, masonry wall; used to mark a floor line or visually to reduce the height of a building. Generally narrower than the other courses.
- **Belvedere**
A summer house on a height or an upper-story open-roofed gallery designed to give a view of the scenery.
- **Bulkhead**
A retaining wall-like structure commonly composed of driven piles supporting a wall or a barrier of wooden timbers or reinforced concrete members.
- **Cable-Stayed Bridge**
A bridge in which the superstructure is directly supported by cables, or stays, passing over or attached to towers located at the main piers
